

Cloud Services

Private Cloud Solutions

Let us help you assess your datacenter – then design, implement, optimize and manage your cloud with little disruption. Our phased approach ensures the cloud can be sustained long-term, focusing on the Technology aspect first. Then we help the business integrate with all key endpoints of the datacenter, working with your company's infrastructure, development and operational staff to form a fluid and cohesive unit that eliminates the knowledge silos that can cripple the dynamic nature of a cloud – People and Process.

Hybrid Solutions

We analyze your operational requirements, then design and build the Hybrid Cloud using various technologies: VMware vRealize Suite, OpenStack, Amazon AWS, Microsoft Azure and other providers.

Public Solutions (Service Provider)

Mastering Process means world-class Governance, which enables cloud resources to be offered as a service at the retail level. Our phased approach to the Public Cloud will help your business scale accordingly while meeting strict compliance and security guidelines that your customers trust – dynamic isolation and segmentation of your consumers' resources.

Cloud Automation and Customization

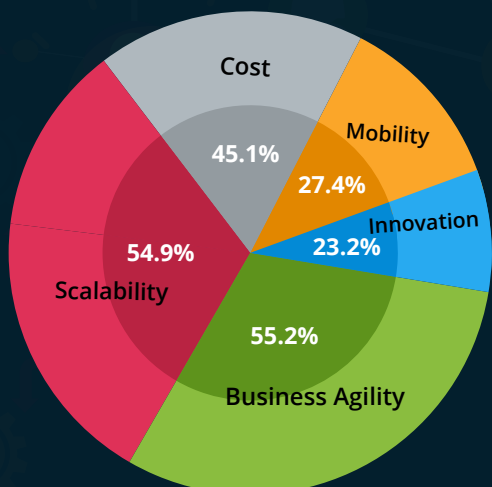

A successful cloud demands that infrastructure resources be delivered as quickly as possible, using software intelligence. Our experts can customize the various cloud products including VMware vRealize, OpenStack using various APIs, Puppet Scripting, DevOps, Perl, Python, PowerShell and various other scripting language.

Solution

IaaS	Basic OS and Core Services
PaaS	Middleware Configured
Basic "Out-of-Box" Automation	Custom Properties
Application Services or Puppet Integration	
Extensibility to VMware and Datacenter APIs– Advanced Automation	Orchestrator
